- Health Care Facility - Project Summary -

Project Name: Ambulatory Care Center & Women's Wellness Centre - Prince County Hospital, Summerside, Prince Edward Island

The Prince County Hospital (PCH) located in Summerside, PE is a 110 bed, 18,000 m² acute care facility and is one of the two main referral hospitals on Prince Edward Island.

In June 2020, the new \$4.357 million Ambulatory Care Center and the introduction of a new Women's Wellness Program was officially opened. The project included 479 square meters of renovated area within the existing hospital and well as the construction of 753 square meters of addition area and a 96 square meter mechanical room.

The new Ambulatory Care Centre includes four main services: Nursing Care Suite, Oncology, Minor Surgical Clinic, and Endoscopy. As part of the work, the new Women's Wellness Program was introduced at PCH.

The electrical design for the project included normal and emergency power distribution systems, lighting, exit/emergency lighting, fire alarm, CCTV, code white, door access and nurse call system. Challenges included connections to existing systems while maintaining services in areas that were still to remain open and operational.
